

Core approaches to responsive organizational management

Four Core Management Policies

JASDEC's business activities are guided by four basic policies calling for a user-oriented approach, compliance with global standards, risk and efficiency management, and a commitment to public responsibilities.

User-Oriented Approach

User-focused business operations are ensured through the direct involvement of participants who are also JASDEC shareholders in governance.

Compliance with Global Standards

As the National CSD, representative provider of securities settlement infrastructure in Japan, JASDEC remains constantly aware of the world's best practice in relation to settlement systems and aims to provide functions that comply with international standards. JASDEC maintains a timely and flexible approach to improvement of operations and the development of new projects.

Risk and Efficiency Management

As a CSD required to centralize operations and expand services, JASDEC is continually working to strengthen risk management and cost reduction.

Public Responsibilities

JASDEC recognizes the public role of its services and ensures transparency in its business activities by actively disclosing information.
