Specifically, in a case where information of Participants is not recorded in Customer Account or Holding Account (without request concerning a Special Beneficiary), etc., the figure is calculated per Classified Account of the recording JASDEC Participant.

However, in a case where the information of Participants is recorded in Pledged Account or Holding Account (with request concerning a Special Beneficiary), etc., the figure is calculated per Participant.

5. "New Record by Individual Transition to Book-Entry Transfer System" is the figure where a process for recording increase based on the "request of individual transition" from JASDEC Participants is calculated as one case.

6. "All Deletion" is the figure where a process of recording decrease based on all deletion is calculated as one case. Specifically, in a case where information of Participants is not recorded in Customer Account or Holding Account (without request concerning a Special Beneficiary), etc.,

the figure is calculated per Classified Account of the recording JASDEC Participant. However, in a case where the information of Participants is recorded in Pledged Account or Holding Account (with request concerning a Special Beneficiary), etc., the figure is calculated per Participant.

7. "Partial Deletion" is the figure where a process of recording decrease based on the "Request of Deletion" associated with the request of conversion, etc. from JASDEC Participants is calculated as one case.

1. "Book-entry transfer (market value)" is the sum of the number derived from multiplying "the transferred number of units per issue per business day for each fiscal year/month" by "the closing price of each issue on the transfer date (if the closing price is not available on the transfer date, the most recent closing price before that day is used)".

With respect to the issues for split, etc. of beneficial interest, those number of units (volume) changes from the effective date of split, etc. of beneficial interest, meanwhile those price (closing price) reflects its effect from the ex-rights date immediately preceding the effective date of split, etc. of beneficial interest.

Therefore, the data set forth above may be different from the real market value.

2. "Account balance (market value)" is the sum of the number derived from multiplying "the account balance (number of units) per issue as of the last business day for each fiscal year/month" by "the closing price of each issue on the same day (if the closing price is not available on the day, the most recent closing price before that day is used)".

With respect to the issues for split, etc. of beneficial interest, those number of units (volume) changes from the effective date of split, etc. of beneficial interest, meanwhile those price (closing price) reflects its effect from the ex-rights date immediately preceding the effective date of split, etc. of beneficial interest.

Therefore, the data set forth above may be different from the real market value.

1. "Real number of beneficiaries" is the one after identification and integration by the beneficiaries' name within the data collection period, whereas "Accumulated number of beneficiaries" is the sum of the number of beneficiaries in each issue (before identification and integration by the beneficiaries' name).

2. The total of the "Real number of beneficiaries" and "Accumulated number of beneficiaries" do not necessarily equal to the sum of "Individuals" and "Institutions" because the "Co-owners" are included in the total. "Co-owned" means the case where an account is co-owned by two or more persons.

3. If an issue has multiple end dates of the calculation period in a year, the number of beneficiaries on all such dates is included in the "Number of beneficiaries by attribute" (by end date of the calculation period: monthly total).

1. The total of the "Account balance" (both units and value) does not necessarily equal to the sum of "Individuals" and "Institutions" because the "Co-owners" are included in the total. "Co-owned" means the case where an account is co-owned by two or more persons.

2. "Account balance (value)" is the sum of the number derived from multiplying "the account balance (number of units) by attribute of beneficiaries per issue as of the end date of the calculation period" by "the closing price of each issue on the same day (if the closing price is not available on the day, the most recent closing price before that day is used)".  
 With respect to the issues for split, etc. of beneficial interest, those number of units (volume) changes from the effective date of split, etc. of beneficial interest, meanwhile those price (closing price) reflects its effect from the ex-rights date immediately preceding the effective date of split, etc. of beneficial interest.  
 Therefore, the data set forth above may be different from the real market value.

1. The figure covers the attribute "Individuals" only. "Institutions" and "Co-owners" are not included.

2. "Unknown" is the figure of participants (beneficiaries) whose birthday is not notified.

3. "Value held by age-group of beneficiaries" is the sum of the number derived from multiplying "the account balance (number of units) by age-group of beneficiaries per issue as of the end date of the calculation period" by "the closing price of each issue on the same day (if the closing price is not available on the day, the most recent closing price before that day is used)".  
With respect to the issues for split, etc. of beneficial interest, those number of units (volume) changes from the effective date of split, etc. of beneficial interest, meanwhile those price (closing price) reflects its effect from the ex-rights date immediately preceding the effective date of split, etc. of beneficial interest. Therefore, the data set forth above may be different from the real market value.
